CAMS WEEKLY REPORT

Week of 6 August - 12 August 1977

1. The Configuration Control Board met Thursday, 4 August
    and placed high priority on the investigation of a
    configuration control item outlining requirements for
    short form menus. Some work currently in progress had
    to be delayed in order to develop complete design
    specifications for this requirement by September.

2. Software release 1.9 was delivered to CAMS data base
    Thursday evening, 4 August. No new software is
    scheduled to be delivered again until the weekend of
    27 August.

3. We have met with COMIREX and defined new/changed
    requirements for processing PRL data. As soon as
    these requirements are approved by all parties
    involved, we will take steps to incorporate the
    coding changes in our Accomplishments subsystem and to
    correct the PRL data in our files. The data correction
    promises to be a massive undertaking.

                                                      STATINTL

                    CAMS Project Manager
